### Notes

- PC hardware containing components of a lower specification than these requirements, or deviating in any other way should only be used after consultation with WENZEL.
- For the graphics card, make sure that picking on the CAD surfaces works properly. The GPU memory plays a subordinate role for the performance within WM | Quartis.
- Microsoft Windows operating system has to be up to date before installing WM | Quartis R2022-2. The current service pack and all available updates have to be installed.
- <sup>\*)</sup> Microsoft's support for Windows 7 ended on 14.01.2020. Installation and operation on already existing Win7 PCs is under the sole responsibility of the customer and without support by WENZEL!
- When using Microsoft Office on the same PC, the important notes in the document "[WM | Quartis and Microsoft Office](#)" must be observed.
